EMPLOYMENT

Erasmus School of Economics, Erasmus University Rotterdam 09/2018–Present
Department of Business Economics
Assistant Professor of Finance

EDUCATION

TUM School of Management, Technical University of Munich 11/2011–08/2018
Chair of Financial Management and Capital Markets
Postdoctoral researcher and doctoral student
Thesis title: Three essays on corporate boards around the world

London School of Economics and Political Science 06/2018–07/2018
Visiting scholar at the Department of Finance (with Dirk Jenter) 09/2017–10/2017

Hong Kong University of Science and Technology 04/2018
Visiting scholar at the Department of Finance (with Vidhan Goyal)

Stern School of Business, New York University 01/2014–04/2014
Visiting scholar at the Department of Finance (with David Yermack)

Technical University of Munich/University of Augsburg 10/2006–08/2011
M.Sc. with honors, Elite Graduate Program Finance & Information Management
Stays abroad at Stanford University and Georgia State University

RESEARCH INTERESTS

Empirical corporate finance, corporate governance, boards, CEOs, capital structure, private equity

WORKING PAPERS

[The economic consequences of a “glass-ceiling”: Women on corporate boards and firm value](#) (joint with Thomas Schmid)

AFA 2016, FIRS 2016, SGF 2016, VHB 2016, Paris December Meeting 2015

VHB Annual Meeting 2016, Best Practice Paper Award

Abstract: To investigate how women on corporate boards affect firm value, we analyze capital market reactions to exogenous board member departures due to death or illness. The market reacts about one percentage point more negatively to departures of women compared to men. An analysis of several potential explanations indicates that this negative reaction is more pronounced in countries where the selection of women is more stringent and fewer women serve on boards. This supports the “glass-ceiling” hypothesis which predicts that a more rigorous selection of female board members leads to superior qualifications of those few who make it to the top.

[Index membership and capital structure: International evidence](#) (joint with Vidhan K. Goyal and Wenting Zhao)

FIRS 2017, China International Conference in Finance 2017, FMA 2017, SGF 2017, FMA Europe 2017, Asian Finance Association Annual Meeting 2017

FMA 2017 and FMA Europe 2017, semi-finalist best paper award

Abstract: How much do shocks to the information environment in equity markets matter for debt supply and the financing of firms? We find that the use of debt increases by about two to three percentage points following exogenous additions of stocks to an index. The leverage response is primarily in public debt markets: Borrowing costs in these markets decrease, while bond liquidity increases. These results suggest that index additions affect leverage because an increase in public information reduces information asymmetries for lenders and increases their willingness to buy information-sensitive debt. Indeed, stocks added to an index are followed by more equity analysts. Overall, we support the view that information production in equity markets spills over into debt markets.

[Does board size matter?](#) (joint with Dirk Jenter and Thomas Schmid)

AFA 2019, European Summer Symposium in Financial Markets (ESSFM) 2018, 2018 SFS Cavalcade North America, 2018 CEPR Symposium

Abstract: This paper uses minimum board size requirements to assess whether large boards reduce firm performance. Since 1976, the legally required minimum size of German supervisory boards increases from 12 to 16 directors as firms pass 10,000 domestic employees. Board sizes increase sharply at this threshold, indicating that the mandate is binding for many firms. Using a regression discontinuity design around the threshold and a difference-in-differences analysis around the law's introduction, we find robust evidence that forcing firms to have large boards lowers performance and value. At the threshold, operating return on assets drops by 2-3 percentage points and Tobin's Q by 0.20-0.25, with similar declines for treated firms after the law's introduction. Firms just above the threshold also generate lower acquisition announcement returns than firms just below, suggesting that large boards undertake worse acquisitions.

[The effects of culture on CEO power: International evidence from executive turnover](#)

revision requested at the Journal of Banking & Finance

SGF 2016, FMA Europe 2016, VHB 2016

[The balance of power between creditors and the firm: Evidence from German Insolvency Law](#) (joint with Frédéric Closset)
